PROFESSIONAL PROFILE

Computer Science undergraduate, passionate about software development, problem solving, and Machine Learning technologies. Skilled in building full-stack and AI-based applications with strong interest in DSA, Machine Learning, and analytical problem solving.

EDUCATION

Reva University | Bengaluru, India

B.Tech. in Artificial intelligence and Data Science

2023 - 2027

GPA: 7.6/10.0

SKILLS

Languages: Python, JavaScript (ES6+), C, Java

Web-dev: React, HTML5, CSS, Vite, Node.js, Flask, REST APIs

Databases: MongoDB, MySQL

DevOps: Docker, Docker Compose, Git, GitHub, Linux (Ubuntu)

ML/AI: TensorFlow, Keras, CNN, NumPy

Deployment: Render, Cloud Deployment

PROJECTS

Chest X-ray Pneumonia Detection | [GITHUB](#)

- **Technologies:** Python, Flask, TensorFlow, Keras, MobileNetV2, HTML, CSS, JavaScript
 - Developed a Flask-based medical imaging application leveraging a MobileNetV2 CNN to classify pneumonia from chest X-rays, achieving 92.5% validation accuracy and enabling automated diagnostic support.
 - Implemented a TensorFlow/Keras-powered REST API for real-time model inference, featuring asynchronous image uploads via the Fetch API, confidence-based predictions.

Gym Management System | [GITHUB](#) | [LIVE](#)

- **Technologies:** Python, Flask, MongoDB, Docker, Docker Compose, HTML, CSS, Jinja2
 - A containerized gym management platform handling 500+ member records with full CRUD functionality across 5+ management modules (members, trainers, subscriptions, schedules, equipment).
 - Deployed using Docker Compose with Flask-MongoDB orchestration on Render, featuring .env-based secure configuration.

CYRIX – Health Risk Prediction System | [GitHub Link](#) | [Live](#)

- **Technologies:** Python, Flask, MongoDB, Scikit-learn, Pandas, NumPy, HTML, CSS, JavaScript.
 - Developed CYRIX, an AI-powered health risk prediction platform using Python, Flask, MongoDB, and Scikit-learn, capable of analyzing 10+ health indicators and classifying users into 3 risk levels (Low, Moderate, High)
 - Designed a hybrid rule-based and machine learning pipeline for risk assessment, and personalized recommendations, with a scalable architecture supporting future integration with wearable devices and remote patient monitoring systems.
-

ACTIVITIES AND LEADERSHIP

- Lead, FACE Art Club
 - Lead cross-functional team of 15+ volunteers in planning and executing decorations for 8+ university events, managing budget and consistently meeting tight deadlines.
 - Streamline project workflows by implementing task tracking system, improving team efficiency by 30% and reducing setup time from 8 to 6 hours per event.
-
